

KUBUS 7.2

Dear ladies and gentlemen,

as planned, we finished the Kubus version 7.2 in the end of July. Kubus 7.2 allows to evaluate costs and revenues according to time for the first time.

Key aspects of Kubus 7.2

1. Costs and revenues can be evaluated based on „project calendar“ and to „time schedule“ according to times. There are interfaces to the MS-Projekt-scheme (including Power Project and Primavera) and for the import from Excel. (Add-on)
2. Already Kubus 7.1 allows switching the language for the surface, the reports and the online help via a function. Since 7.2 the restart belongs to this function to assure the fully switch. (Add-on)
3. The linking of existing access-databases was simplified.
4. All exported data can be send by mail automatically (SMTP oder MAPI) as an attachment
5. The function „Edit ID“ > Check IDs" verifies whether the ID-definition is alright.
6. Description and long text can be displayed in any language.
7. The XHTML-description can be edited via double click now.

8. The report "Estimation Sheet Direct Costs" can be exported to Excel.
9. The „lump sum“ and the "lump-sum-discount" according to GAEB can be edited.
(Except Subcontractor BoQ).
10. The views for CTK evaluation can be summarized.
11. Further adaption in the Subcontractor Controlling (view Subco-Inv/Perf Qties)
12. Data exchange, according to REB format DA11S is possible (larger ID possible;
e.g. transfer from QTO)
13. The new report „User based authorizations“ offers the optimized evaluation for
the access control.
