

KUBUS 7.1

Dear Ladies and Gentlemen,

As announced, we finished the version Kubus 7.1 this week.

Key aspects of Kubus 7.1

1. Since Kubus 7.1 the operating system MS Windows 2000 is not supported anymore.
2. The online help works via a web-browser
3. New Setup via „InstallShield“
4. Oracle 11 authorized for MS Windows 2008 Server (32-bit); 64-bit-authorization coming soon
5. Larger enhancements
 - a. REB 23.003 version 2009 (quantity entry with picture)
 - b. Integration of time line (phase I; no Kubus-standard)
 - c. BoQ-Comparison and data transfer (phase II; no Kubus-standard)
 - d. Easy language and path switch (no Kubus-standard)
6. Part of some smaller enhancements
 - a. Automatic Mails of GAEB data
 - b. Export of nominal hours and import of actual hours
 - c. „Reference: SubcoEv-BoQ“ and „Info: SubcoEv-BoQ“
 - d. Item allocation in EU-structure
 - e. Redesign view „Subco-Inv/Perf-Qties“
7. Concept for document filing in Kubus

Compatibility

1. This Kubus-version is based on the database version 43.
The use of this DB-version is not possible anymore with former Kubus-versions.
2. With this Kubus-version only report- and export templates-libraries of the version 44 can be used.
3. This Kubus-version works with the version 5.1 of the item data interface. This is not downwards compatible with previous versions.
